

Expert on-site O₂ solutions for hyperbaric oxygen therapy

Hyperbaric oxygen therapy is an increasingly popular treatment for various injuries and illnesses – from multiple sclerosis to sports injuries. Patients usually spend about an hour in a pressurized chamber where they breathe high-purity oxygen through a mask. This elevates the oxygen content in their bloodstream and speeds up the healing process.

Expert on-site O₂ solutions for hyperbaric oxygen therapy

Oxygen plays a crucial role in hyperbaric oxygen applications. That's why you need access to a **reliable** and **uninterrupted supply** of O₂ **at any time**. Your oxygen also must have the **required purity** to supply the masks.

On-site oxygen generation – the preferred solution

Many companies still purchase their oxygen – even though generating your O₂ on-site offers more advantages. Here are just four:

Greater
cost-efficiency
saves you money

Eliminating bottle or liquid
deliveries reduces your
environmental footprint

Take charge
of your own
oxygen supply

Less hassle by
removing supply
logistics

Take your operation to the next level with the PPOG HE

30% more efficient than traditional oxygen generators, Pneumatech's PPOG HE gives you the oxygen volume, purity and reliability you need at a massively reduced cost and a smaller environmental footprint:

- Lowest oxygen cost
- Dependable supply of oxygen without expensive O₂ deliveries
- Eliminate transportation emissions for a greener operation
- No logistical headaches associated with third-party supplies
- Small size saves space in treatment centers
- Oxygen filters help safeguard O₂ purity
- Automatic start-up and autonomous operation ensure user-friendliness

More than a superior product

But Pneumatech offers you more than “just” the best oxygen generator on the market. We also provide the equipment and expertise you need to ensure that your oxygen is optimal for your application.

Expert advice and support

Interested in taking your hyperbaric oxygen treatment center to the next level with Pneumatech? Then get in touch with us now and provide us with some information on the number of your breathing masks, oxygen chambers and the air pressure you want to run them at. Our experts will then help you find the equipment that best meets your needs. If you don't have that information or need help, they are ready to help you through the specification process.
